

## ELASTO-OHJAT

Elastinen tuntuma auttaa hevosta pysymään tasaisesti pyöreänä ja saa selän toimimaan.

Pehmeä ohjastuntuma opettaa hermostuneita, herkkiä tai nuoria hevosia luottamaan ratsastajan käteen.

Hevoset jotka painavat kädelle, oppivat nopeasti kevyempään tuntuun.

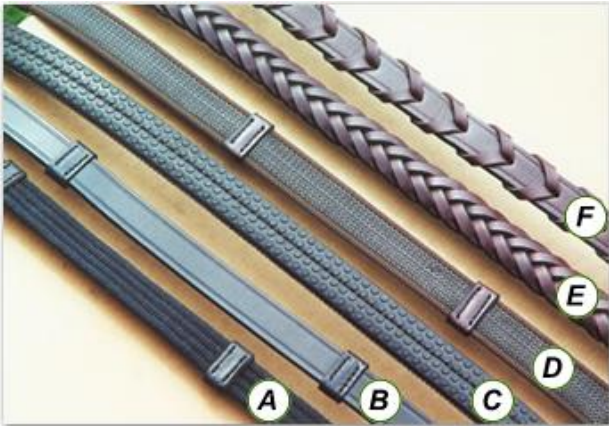

Vähentää kovan, epävakaan tai tottumattoman käden vaikutusta.

Opettaa ratsastajalle myötäilevän ja elastisen tunteen tunnetta.

Vähentää nykäisyjä kun ratsastaja jää jälkeen tai menettää tasapainoaan.

Kuva1: Rein-Aid, lyhyt välikappale normaaliohjan ja kuolainrenkaan väliin, 45 € sis alv 23%

Kuva2: Elasto-ohjat, 105 € sis alv 23%

A = Cotton Web with hand stops, black only

B= Flat Leather with hand stops, black

C= Rubber Grip, brown or black

D= Rubber Web, brown or black

F= Leather Lace, brown only

All riders, no matter what discipline they ride, seek harmony with their horse (this is where riding seems really easy). This requires a balanced seat, the ability to follow the motion of the horse, tact, and independence of the aids. Any stiffness in the rider will result in a lack of harmony.

Stiffness in the riders arms and hands will cause the horse to become tense, hollow, rigid or downright disobedient. This situation is common and an elastic contact allows the horse to relax and trust the bit.

**Rein-Aid®** helps the horse 'forgive' mistakes made by the less than perfect rider. Not only is this better for the horse, but it keeps him willing and easier to ride. Because the horse is rounder and softer with an elastic contact, the rider can focus on 'feel', position, timing, etc. As the skill level grows, so does the horse's trust in the rider and the wonderful feeling of harmony can be achieved.

Professionals are reaching for the **Rein-Aid®** to reschool their sensitive horses that are 'afraid' of the rider's hand. For these horses, obtaining a contact is very difficult, they simply are not willing to 'hold hands with the rider'. The slight give in the rein alleviates their fear of being trapped. Also extensively used for horses that are stiff or locked in the jaw, **Rein-Aid®** encourages the horse to chew gently on the bit (creating that saliva we love to see) and soften through their topline. All this is achieved in a compassionate, safe manner without the need for training aids that artificially force the head down.
